

Make the Power of the INTERNET Work for You!

Now you can with...

Erez and ErezMobile

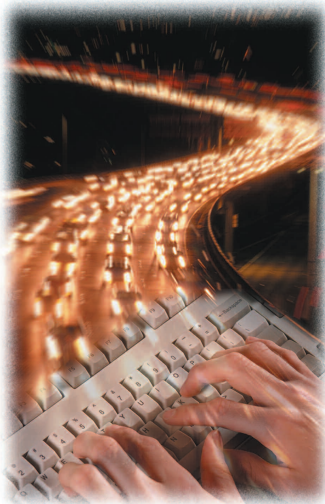

The only products on the market that allow your customers to:

- Research real-time rental car rates and availability
- Choose miscellaneous charges and coverages
- See the total estimated charges
- Make a reservation and receive a confirmation

ALL DIRECTLY FROM YOUR WEB SITE!

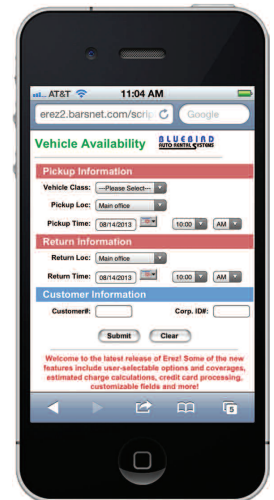

YOU DON'T HAVE TO MAINTAIN OR UPLOAD RATES ON YOUR WEB SITE EVER AGAIN!

The screenshot displays the 'Renter Information' form for Bluebird Auto Rental Systems. It is divided into two main sections: 'Personal Information' and 'Rental Information'. The 'Personal Information' section includes fields for First Name (Angela), Last Name (Margolit), Address (200 Mineral Springs Drive), City (Dover), State (NJ), Zip (07801), Phone#, E-mail (angela@barsnet.com), DL Number (M209367390672), Person booking the rental (Ben), Voucher#, Promotion Code (AAA), and Notes (Prefers red cars!). The 'Rental Information' section shows a Midsize car class with a picture of a blue sedan, a rate of USD55.00 per day, unlimited free miles, and a USD0.00 excess miles charge. It also lists pickup and return times and office hours.

Erez and **ErezMobile** are software products written in WebSpeed, a Progress development language used for web-based transaction systems. ErezMobile has all the same great features as Erez, with screens designed for your mobile device! The software allows internet users to check rental car rates and availability for a particular date range by opening a pipeline directly from your web site to your RentWorks database. And now they can do it from their mobile devices!

You can flag which rates will be seen by the internet user, and Special Events and Rate Utilization can be set up to block out specified vehicles and rates. You can even load pictures of your vehicles! When the customer makes a reservation, the information is automatically loaded into your RentWorks database.
