

Introducing...

ErezMobile

All the same great features as Erez, with screens designed for your mobile device!

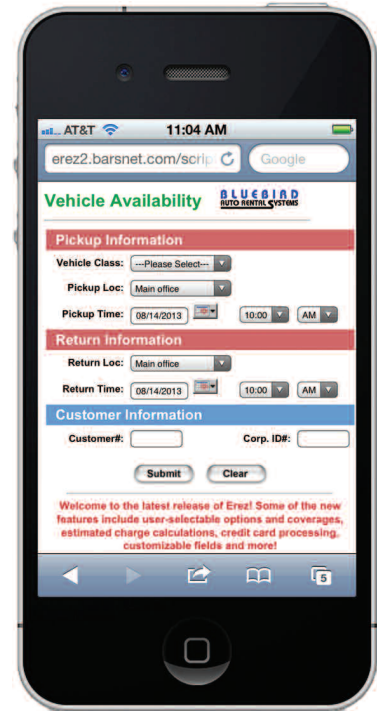

Make the Power of the INTERNET Work for You!

The only product on the market that allows your customers to:

- Research real-time rental car rates and availability
- Choose miscellaneous charges and coverages
- See the total estimated charges
- Make a reservation and receive a confirmation

ALL DIRECTLY FROM YOUR WEB SITE!

YOU DON'T HAVE TO MAINTAIN OR UPLOAD RATES ON YOUR WEB SITE EVER AGAIN!

ErezMobile is a software product written in WebSpeed, a Progress development language used for web-based transaction systems. The software allows internet users to check rental car rates and availability for a particular date range by opening a pipeline directly from your web site to your RentWorks database. And now they can do it from their mobile devices!

You can flag which rates will be seen by the internet user, and special events and rate utilization can be set up to block out specified vehicles and rates. You can even load pictures of your vehicles! When the customer makes a reservation, the information is automatically loaded into your RentWorks database. And if you have the Credit Card Processing module on your Bluebird system, you can also obtain credit card authorizations and process deposits directly from your web site.

The initial "Getting Started" fee includes:

- Erez, which is loaded on the web server that hosts your web site
- Five transaction agents in WebSpeed, allowing up to 30 users to query the RentWorks database simultaneously
- WebSpeed Messengers, which must reside on the web server

The monthly Hot-Line Support/Software Subscription fee for Erez is based on the number of booked reservations and no-shows, plus a hosting fee.
