

NetRent

and

The best vehicle rental software in the industry is hosted by the most reliable cloud server in the industry. You can't beat that combo!

NetRent provides all the benefits of the most powerful and dependable car rental and loaner software available – without having to install it on your computer.

Benefits of NetRent

- Low Cost! After initial startup fee, for a small charge per contract opened, you'll receive:
 - Access to RentWorks 24 hours a day, seven days a week
 - System administration by Bluebird technicians, including nightly backups
 - Firewall security
 - Hot-line support, Monday-Friday 8am-7pm EST, USA
 - The latest releases, enhancements and bug fixes
- All you need is a PC, printer and high speed Internet access.
- Access your database from anywhere.
- Concurrent Users: Connect as many devices as you wish to access your database, saving you licensing costs.
- Easily activate any add-on software modules from Bluebird's ever-growing library.
- Multiple training options: via telephone, 3-day class or onsite, plus online tutorials, webinars and complete documentation.
- Interfaces to third party vendors, including popular accounting packages, rate management, toll violations and parking tickets.

You can rest easy knowing that your data is safe and secure in the Amazon Cloud.

Reliable

Backed by Amazon's massive infrastructure, AWS is the industry leader in reliability, with unparalleled uptime and availability.

Nightly Backups

Data is backed up every night to Amazon's S3 data storage, which is accessible from anywhere in the world and can be restored across zones. Thirty days of back up history is kept at all times. Data centers are located around the world, including two in the United States, Europe, Asia-Pacific and South America.

Security

- PCI-DSS level 1 certified
- Firewall protected
- Trend Micro Deep Security deployed
- Alien Vault USM Anywhere

Advanced protection for physical, virtual, and cloud servers. Delivers comprehensive, adaptive, highly efficient agentless and agent-based server protection, including anti-malware, intrusion detection and prevention, firewall, integrity monitoring, and log inspection.

Microsoft Platforms

- Windows Server 2016 operating system
- Multi-processor virtual servers
- Front end app servers
- Back end database servers
