

# CCPRO for RentWorks

## Credit Card Authorization and Draft Capture Made Easy!

CCPRO, a leading-edge credit card processing system, is yet another example of how Bluebird Auto Rental Systems can help streamline your counter operations. Fully integrated with RentWorks, CCPRO allows you to perform the credit card authorization and draft capture functions of your operation quickly and efficiently – saving you time and money!

### Features:

- ❖ CCPRO performs the credit card authorization and draft capture functions for **all** major credit cards, including American Express.
- ❖ CCPRO identifies preferred customers quickly and automatically transfers their customer history record into the current rental contract.
- ❖ Saves valuable time for counter agents by eliminating key strokes. And CCPRO also reduces errors resulting from incorrect data entry: when the customer's credit card is swiped through the magnetic strip reader, the cardholder's name, card number and expiration date are electronically captured.
- ❖ CCPRO eliminates the need for manual entry of credit card vouchers at the end of each day – saving several hours of labor.
- ❖ Provides a security check against credit card fraud. The card's magnetic strip identifies the correct owner of the card even if the name and card number on the front have been altered. In addition, when the card goes through the magnetic strip reader, it is automatically checked against a database of known stolen credit cards.
- ❖ CCPRO's advanced technology requires only **one** Internet connection for **multiple** magnetic strip readers. In addition, the bank-supplied printer for credit card imprints can be eliminated because with the BARS system, everything prints directly on the rental agreement.
