

Now available for **RentWorks™**

Scan Driver Licenses Directly Into Your Bluebird System!

SnapShell is the premier ID card scanning solution. Easy to use, SnapShell incorporates the latest OCR technology to automatically extract the appropriate information from the scanned image and place it into the correct fields. SnapShell also extracts the signature and the person's face into separate image files.

The license is automatically scanned as soon as you place it onto the scanner. SnapShell then indexes the card image by saving it under the owner's name. With the software, you can choose where the file should be stored on your system.

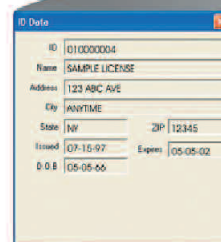

When a contract is opened, you can select which driver license will be associated with the customer record. Upon doing so, the image is loaded into the database and the file is removed from the initial directory into which it was placed. Therefore, it is not necessary to have a scanner attached to each workstation — everyone on your network has access to the data.

SnapShell Features:

- Easy USB installation
- Compact unit with small footprint
- Integrates seamlessly with Bluebird's RentWorks
- Scans, saves and indexes automatically
- Supports wide variety of image formats (BMP, JPG, TIFF, PCX, TGA, PNG, PSD)
- Reads current licenses from all 50 U.S. states and over 45 countries around the world
- Supports PDF-417 Barcode reading

**Increase productivity and reduce human error with SnapShell!
Call us today for more information.**

Note: This device requires RentWorks ver. 3/Service Pack 6, Progress ver. 10, and a PC (not a Wyse Winterm).
