

Available for **RentWorks4™**

Scan Driver Licenses Directly Into Your Bluebird System!

SnapShell® R2 is the premier ID card scanning solution.

Easy to use, SnapShell® R2 incorporates the latest OCR technology to automatically extract the appropriate information from the scanned image and place it into the correct fields. SnapShell® R2 also extracts the signature and the person's face into separate image files.

Simply place the license onto the scanner and press the scan button. SnapShell® R2 then indexes the card image by saving it under the owner's name. With the software, you can choose where the file should be stored on your system.

When a contract is opened, you can select which driver license will be associated with the customer record. Upon doing so, the image is loaded into the database and the file is removed from the initial directory into which it was placed. Therefore, it is not necessary to have a scanner attached to each workstation — everyone on your network has access to the data.

SnapShell® R2 Features:

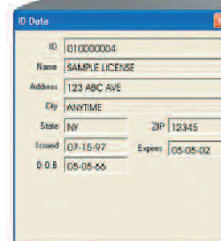

- Easy USB installation
- Compact unit with small footprint
- Integrates seamlessly with Bluebird's RentWorks
- Scans, saves and indexes automatically
- Supports wide variety of image formats (BMP, JPG, TIFF, PCX, TGA, PNG, PSD)
- Reads current licenses from all 50 U.S. states and over 90 countries around the world
- Supports PDF-417 Barcode reading

Increase productivity and reduce human error with SnapShell® R2!
Call us today for more information.

Note: The scanner will not recognize languages with non-standard characters, such as Chinese, Japanese, Korean and Russian.

Note: Images are captured facedown.
