

RentWorks Version 4.1.M22 Release Letter

SIGNIFICANT CHANGES:

RentWorks Webhooks API - The RentWorks Webhooks feature captures specific RentWorks events, such as Reservations entry and modification, Contract Open/Modify/Close as well as many fleet and Non-Revenue movement events, connects to a customer's API, and transmits the appropriate dataset. These datasets can be parsed on the customer's system and the data be used in a variety of ways.

External systems such as accounting, ERP, fleet and reporting can be updated in real time with the data from these webhooks.

In order to implement this feature, the customer will need to create an endpoint to accept these datasets. The RA/Res, Fleet and Non-Rev events can be sent to different endpoints. Basic Authentication is currently supported by RentWorks Webhooks.

Contact Rentworks Sales or Support for additional information.

Enhancements/Improvements:

None – Tickets listed below

Descriptions of tickets addressed, in order of impact:

Program	Ticket	Brief Description
Level 1		
Interfaces	RW360-1648	Create RentWorks Webhooks API

Level 2

None

Level 3

OTA API RW360-1671 Modify OTA to accommodate multiple changes in Rez Plugin to support BlueBird Payments
